

Interview No	What does Climate Change mean to you?*	Do you think the Australian government and people could do more on Climate?*	Did you know the Australian government gives, on average, \$10.5 billion in subsidies to the Fossil Fuel industry each year?*	Do you think that money could be better spent elsewhere?*
1	It's a man-made catastrophe		Yes	
1	Man-made greatest challenge, inactivity is frustrating	Is being devolved to individuals	Not exact	Yes as with defence Government money needs to be redirectd
2	Threat to my future, cost of living will go up, migration changes, food sources all changing and unpredictable	need to step it up batteries not coal, maybe nuclear	Not exact number	Couldn't say
3	Temperatures, GHG make it warmer and unpredictable			
4	Our actions affect the future, gotta take care of the planet			Embarrassing could def go to a million other things that are more important
4	Important to me, for future generations. Important		Not exact value	I agree
5	Weather changing dramatically noticable	Big Issue, everyone, It's a group effort. I may do something but if others don't...?	No I didn't know	I'm sure it could be better spent
6	No strong views. I don't know how we are impacting it		No	We need fossil fuels. don't we?
6	A bit Climate change, a bit cyclical		No	Yes we need fossil fuels
7	I don't know heaps, but I don't want the oceans to be polluted			Fossil fuels are negative aren't they
	It's def real. Pollution from cars etc not ideal especially to trees etc, and it is causing seas to rise			Could be better spent elsewhere. The world's just a money making platform and that is not the way to save the environment, so elsewhere would be good
7	Poluution is a problem. Climate change is partly the cycle. I don't think Climate change will be impacted much by what we can do			All govt's go under the table with fossil fuels. There's a lot of interconnection between fossil fuels and govts.
8	Climate was made by the creator. It has been cycle. That's what we have now - with la Nina. But humans seem to contribute with fossil fuels etc and deforestation. Could lead to the end of the world			
9	Very big issue, it will be the end for us in the future	More could be done but we are too selfish. Govt is too involved with re-election	No	Not sure
9	I agree	In theory a lot could be done but it's not goin to happen		
10	Is global warming		No	Could go to research into saving the planet
10				Could go intosomething environmental
11	Described the causes, capitalism, consumerism. Definitely exists. Could affect future generations. But we need to focus on it	Down to the discipline of people, and humans are not very disciplined. Processes are in place, but I am not very well versed. People should be responsible for their actions. It will always come down to the individual	No	As a business student, you can see the motivation. It's unfortunate and unfair, but that's the reality, the broken world we live in. Obviously it could be spent better helping people.
12	I do science, It's the future, our future, and it's not a good one	Not doing enough	Yes	I don't think that's doing enough
13	The future there may be more disasters. For us a humans we should protect the environment	We should do more	No	
14	s a problem we all have to deal with. We've been screwing ourselves for 300 years and we need to find a way to deal with it	They could do more.	no	Definitely on a cause that involves people directly to netter get the base fuel line
15	Driven by the capitalist elite. Only gets action when there is a chance of increasing profit	We need to reorganise society to be based on the people.		
16	No answers			
16	Its the change in the ozone layer affecting eco systems			
17	ve been fighting for climate for a while. I want to grow up in a word that isn't dying	Defintely not doing enough at government level	Yes	Defintely could go to health etc definitely not fossil fuels, but on sustainable energy
18	Not really sure, don't think about tit much			
18	Not really sure, don't think about tit much. But it's a negative thing.		No	Coal mines are in politician's back pockets. But absolutely could do better
19	Tragedy	Govt defintely not, people maybe could. Some are others are doing nothing	NO	What she said
19	Devastating	We could all do better!		Yeah, what she said
19	Scarey	if everyone says what difference can I (one person) make, then we are not going to go anywhere		
20	Really big issue that big business and govt need to focus on. It has really bad consequences	Probably not. There's a few incentives but I don't think so		I couldn't say
20				Yes they could spend it on solar panels and more sustainable things
21	Very evident, rising oceans coral bleaching		Yes	efinitely should go on more sustainable things. Our government definitely liked to prop up fossil fuels
21	People should pay more attention to it. I would do soemthing if I could			
21	Big threat to everyone and could be taken more seriously			Not the best thing. That's terrible I don't like that at all
22	I know it's happening, pretty evident. It's a cycle. It is getting hotter	Of course we could deccrase our emission foot print, recycle reuse, take the train. Little things do matter	No	Not looked into budget spending, but it can be used on much better things. 10 billion. It's astonishing on something that is damaging the earth. Maybe into something benefit the earth.
23	It's important to my future. If we don't do stuff now there may not be future for me.	I don't know	No	I'm going to trust the government, but I know they do many questionable decsioins on many things like making money, but I think they could do more for renewables etc.
23			No	Aren't they selling things? 10 billion is a lot

	24	It has much to do with rising seas and melting ice and global warming		No	Of course it could be spent in a better way
	24	I'm from Denmark and as a child we would have had snow in winter, but now it is warmer, so it is changing			I agree
	25	Idon't know much except carbon emisions don't really help		No	Definitely the money could be better spent
		Hotter weather - is a bad thing	We could do so much more like electric cars.	No	I agree
	26	Existential threat, important to our species and our planet.	Current government is trying to take steps. They cannot change overnight, so I am comfortable with the Labor government	Yes	And yes, of course. But in terms of political commitment many things need to be balanced. But, yes, this needs to be their top priority
	28
